

What is claimed is:

1. An interlabial pad comprising:

an absorbent body for absorbing liquid; and

5 a cover body covering the absorbent body in an enclosing manner and comprising a surface side sheet having a permeable property for liquid and a back face side sheet having an impermeable property against liquid;

10 the interlabial pad being fitted between labia with the surface side sheet set at a body side;

wherein the cover body is provided with a continuous or discontinuous parting zone that is parted by actions of water, along which the cover body is separated into a plurality of small sheet pieces when water acts.

15 2. The interlabial pad according to Claim 1;

wherein the parting zone is provided in the back face side sheet.

3. The interlabial pad according to Claim 1 or 2;

wherein the parting zone is a seam part formed by overlapping the plurality of small sheet pieces one another.

20 4. The interlabial pad according to Claim 3;

wherein the plurality of small sheet pieces are adhered together at the seam part by an adhesive agent.

5. The interlabial pad according to Claim 3 or 4;

25 wherein the seam part is a longitudinal seam part extending in a longitudinal direction of the interlabial pad; and

a sheet piece which overlaps the other sheet piece at the longitudinal seam part and covers a side closer to a longitudinal central

line of the interlabial pad is positioned at an absorbent body side.

6. The interlabial pad according to Claim 3 or 4;

wherein the seam part is a lateral seam part extending in a lateral direction of the interlabial pad; and

5 a sheet piece which overlaps the other sheet piece at the lateral seam part and covers a side that becomes a dorsal side when the interlabial pad is fitted between labia is positioned at the absorbent body side.

7. The interlabial pad according to any one of Claims 3 to 5;

10 wherein the seam parts contain a longitudinal seam part extending in the longitudinal direction of the interlabial pad and a lateral seam part extending in the lateral direction of the interlabial pad; and

a sheet piece which overlaps the other sheet piece at the longitudinal seam part and covers a side closer to a longitudinal central line of the interlabial pad is positioned at the absorbent body side; and

15 a sheet piece which overlaps the other sheet piece at the lateral seam part and covers a side that becomes a dorsal side when the interlabial pad is fitted between labia is positioned at the absorbent body side.

20 8. The interlabial pad according to any one of Claims 1 to 7;

wherein the back face side sheet is equipped with a mini-sheet piece on a surface at a side opposite to the absorbent body side.

9. The interlabial pad according to any one of claims 2 to 8;

25 wherein the back face side sheet is made uneven at least at the surface opposite to the absorbent body side.

10. A packaging body for individual package of interlabial pad, comprising:

a packaging sheet; and

an interlabial pad covered by the packaging sheet;

wherein the packaging sheet is provided with a continuous or discontinuous parting zone that is parted by actions of water, along which the packaging sheet is separated into a plurality of small sheet pieces when water acts.

11. The packaging body for individual package of interlabial pad according to Claim 10;

wherein the packaging sheet is a liquid impermeable sheet with an impermeable property against liquid.
